

OPENVERSE/BITGOLD

OPTIONS 2026Q2

1. Project Overview

Bitgold Options (BTG Options) is an important component of the BTG market value management system within the Openverse ecosystem.

In previous phases, many users showed interest in BTG but did not become holders due to market conditions or timing. As the ecosystem continues to develop, some users now intend to re-enter. However, the secondary market for digital assets remains volatile, and BTG is no exception.

To reduce holding risks, optimize liquidity structure, and support long-term value growth, Openverse Team and Utopia Foundation jointly introduce the BTG Options Plan.

2. Mechanism Description

Users can subscribe to BTG at the current market price using USDT (BSC), and will receive the base BTG allocation, additional bonus BTG (depending on the selected term), and fixed Staking rewards (12% APY).

Release rules:

- BTG (including bonus portion) is released linearly on a monthly basis.
- The released portion is automatically staked each month.
- Users receive corresponding Staking rewards simultaneously.

Note: The BTG used in this program is sourced from the original IDO allocation pool (total 30 million BTG), with remaining balance available.

3. Option Terms and Return Model

Duration	Bonus	Estimated Total Return
6 months	10%	~120%
12 months	20%	~144%
36 months	30%	~190%

Returns include compounded staking rewards (12% APY). Estimates only, not guaranteed.

4. Participation Process

- Select BTG amount and duration
 - Agree to risk terms
 - Pay with USDT (BSC)
 - Receive option order
 - Monthly release + staking rewards
-

5. Validator Node Incentive Policy

The BTG Options Program primarily targets validator node builders, while also allowing participation from community users.

Node tiers and benefits:

- Entry-level Validator
Holding: 10,000 – 99,999 BTG
Benefit: 1 year of free server hardware and maintenance
- Standard Validator
Holding: $\geq 100,000$ BTG
Benefit: 3 years of free server hardware and maintenance
- Super Validator
Holding: $\geq 1,000,000$ BTG
Benefit: 3 years of free cluster servers and dedicated support

Additional notes: Users purchasing 10,000 – 100,000 BTG without meeting node requirements need to pay 2,980 USDT as server and technical service fees.

6. Core Philosophy

This program is designed for users who:

- Recognize the Openverse 30-year vision of “Application First”
 - Believe in the long-term value of BTG
 - Adopt a long-term investment mindset
 - Understand and accept market risks
-

7. Risk Disclaimer

The BTG Options Program involves digital assets. Please be aware:

- Market prices are volatile
- Returns are estimates, not guarantees
- Liquidity and regulatory environments may change
- Staking rewards depend on network conditions
- Please participate with full understanding of the risks.

8. Summary

The BTG Options Program is not a short-term speculative tool, but a structured participation mechanism that reduces entry risk, aligns with long-term ecosystem development, and connects users with the validator network.
