

# Openverse IDO Invitation

## Openverse 30 public nodes plan

Openverse Team, [service@openverse.network](mailto:service@openverse.network)

Dear partner, hello:

Here is the official operations team of Openverse Network. This letter invites you or your company to provide us with some support and assistance. Especially inviting you to bulk purchase our Bitgold and participate in our validator node construction.

### Openverse Introduction

Openverse is a Layer0 blockchain network running on OpenOS. The network mainly uses protocol cross chain technology to achieve "the transmission of value (tokens/NFT/messages) between chains is as simple as sending emails". Our main niche market is "the issuance, trading, and payment of Bitcurrencies". The combination of Bitgold and Bitcurrencies will truly realize the peer-to-peer currency theory of Bitcoin.

You can learn more information through the official website of [www.openverse.network](http://www.openverse.network)

### Openverse technology and consensus

Openverse technology originates from open-source programs of Sonala and COSMOS, and integrates new protocols such as VRC10, VRC11, and VRC12, integrating OpenSwap as a global value exchange market. The network block cycle is 0.45 seconds, and the TPS is 100000 level. We will develop zero knowledge proof and privacy computing capabilities in future versions, and support EVM through extensions. The network adopts the consensus mechanism of DPOS validators, and the initial validator plan is as follows:

- 10 team nodes
- 20 foundation nodes
- 30 public nodes
- 40 sovereign state nodes (reserved)

### Openverse Bitgold:

Bitgold is the main currency of Openverse, which can be used as a GAS fee for network wide transactions, as a pledge right for node DPOS, and as a base asset for Bitcurrencies and an OpenSwap trading medium. The total circulation of Bitgold is 200 million, with a constant number and no additional issuance, mainly allocated to:

Team allocation: 10 million Bitgolds, linearly released over 20 years after the main network goes online for 10 years.

Foundation reserve: 20 million Bitgolds, linearly released over 20 years after the main network goes online for 10 years.

Public IDO: 30 million Bitgolds, unlocked immediately through IDO.

National Reserve: 40 million Bitgolds, unlocked immediately upon purchase by the country.

DPOS mining output: 100 million Bitgolds, 30 years, with a decay rate of 0.618 every four years.

**Openverse validators plan :**

Openverse adopts the DPOS consensus mechanism, with blocks generated by 100 active nodes. In the initial stage, we created 10 team nodes, 20 foundation nodes, 30 public nodes, and reserved 40 sovereign country nodes.

We launched IDO in April 2024 and initiated the construction of a public node plan. We will allocate 30 million Bitgolds pieces to correspond to 30 nodes, with 1 million pieces per node. We are seeking your support. You can donate digital assets and we will use Bitgolds as a reward. The Bitgolds you have obtained is fully released and can be transferred in the wallet or pledged on the chain to continue producing Bitgolds. Our pledged output annualized return starts at 60% and gradually decreases.

**Openverse IDO :**

If you are an ordinary user, you can donate digital assets through our IDO Dapp to obtain Bitgold, and then entrust it to the validator node to obtain pledge income.

If you are an institutional user, purchase Bitgold in bulk at a discount. You need to pledge over 100000 Bitgolds, create a self owned validator node, and participate in consensus and mining across the entire network. You will receive: access to our technical support; A node for customizing brand names; Collect a 10% commission on the proceeds from entrusted pledge; At the same time, it also obtains its own pledge income.

Welcome to support the future of Openverse, thank you for your support.

Finally:

When we complete the construction of 30 public nodes, we will launch a well-known exchange listing plan, with an expected issuance price of 5 USD/Bitgold.

We welcome you to provide various mature services, including but not limited to: investing in BTG purchases, investing in nodes, providing advertising services, and trading on exchanges.

Welcome to support the development of our public chain project, thank you.

Yours, Sincerely, With best wishes

Openverse Team
